The Simple Way to *Design with Color*

FXLuminaire®

My Design speeds up the design process by combining the power of My List with actual images of your project site. The tool is free, easy to use, and now features **Night Mode with Color** for dynamic nighttime lighting effects. Best of all, your project information is stored securely in the cloud, so you can access it anytime from anywhere.

With My Design, you can provide instant recommendations to customers and produce detailed, visually stunning design proposals. You can also generate accurate product lists for faster ordering and even use your lighting design as an install plan for your crew.

My Design is available in English, Spanish, French, German, and Russian.

It's easy to use **My Design**:

Take pictures of the project site and import them into the tool.

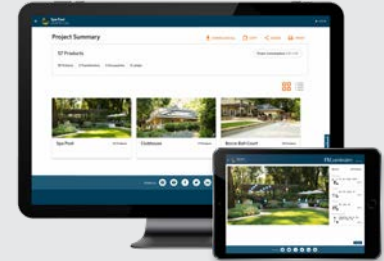

Drag and drop lighting products over each image and area of the property.

Easily design a Luxor® System and download colors for quick programming.

Export a final copy of the design to clients and a product list for local distributors.

Work Smarter with My Design

All you need is a free account to get started!
