

# CORA™ COLLECTION

## KEY BENEFITS

Built for long-lasting performance, corrosion-resistant Cora Collection fixtures combine a durable, select brass construction with a high-end, antique bronze finish that adds elegance to a range of outdoor applications.

### Cora CA-51 Accent Light

This multidirectional fixture offers innovative up/down capabilities for design flexibility and a fully potted back body with an IP66/67 rating to ensure watertight performance.

### Cora CW-31 Petite Wall Wash

This fixture's size makes it the ideal choice when a small footprint is needed. Providing a soft, even beam spread that prevents hot spots, it's perfect for tying in focal points.

### Cora CW-51 Wall Wash

Offering superior light output and multiple power and beam spread options, this robust powerhouse provides a radiant beam spread to highlight focal points and add security.

### Cora CN-51 In-Grade

Featuring a flexible exterior gasket for easy installation, this low-lying fixture delivers specified lighting at night while blending seamlessly with the landscape during the day.

## IN THE FIELD

**Challenge:** Landscape lighting fixtures are often more noticeable during the day, which can create an undesirable aesthetic.

**Solution:** Cora Collection fixtures offer an antique bronze finish that blends seamlessly with the landscape, ensuring the fixtures will be less noticeable during the day.

**Challenge:** In-grades and well lights often need proprietary sleeves and back boxes. Sleeves may also be required on-site prior to installation. This can cause issues and delay installation when the products aren't on-hand or inventoried at a local level.

**Solution:** The CN-51 uses standard, off-the-shelf 2½" Schedule 40 PVC, which ensures that all the necessary components will be readily available for installation.

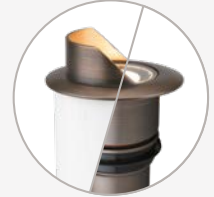

## IN THE DESIGN OFFICE

**Challenge:** Designers are always looking for fixtures that can be used in multiple ways, provide added features, and deliver long-lasting durability in any landscape.

**Solution:** The multipurpose fixtures in the Cora Collection distinguish themselves with durable, select brass construction, innovative adjustment features, screw-on shrouds, and superior quality assurance.

**Challenge:** Designers often wish to specify lens accessories with lighting fixtures. These lighting enhancements can be key when looking for specific effects.

**Solution:** Cora Collection fixtures are built with removable faceplates, allowing quick access to the internal components. This simplifies lamp maintenance and makes it easy to add lenses and glare louvers to achieve the desired effect.

## WIRE CONNECTOR COMPARISON
